CLAUDE.md — MAG Website Dev

> **Read this at the start of every session before touching any file.**

What This Project Is

A static HTML/CSS/JS website for **My Autism Gifts** — Rob Hodes' autism and neurodivergent life coaching practice. This is the **development replica** of myautismgifts.com, built to be edited locally and deployed to production via GitHub → Netlify.

- **Live site:** https://myautismgifts.com (WordPress/Elementor — still live during transition)
- **Dev repo:** https://github.com/CaptainComputer1/my-autism-gifts-website
- **Netlify project:** `my-autism-gifts` (my-autism-gifts.netlify.app) — My Autism Gifts' account, connected to GitHub
- **Local dev server:** `npx serve .` from this folder → http://localhost:PORT

File Layout

```
MAG Website Dev/
├── webpages/
│   ├── index.html          Homepage (hero, welcome, two-path, values, testimonials,
CTA)
│   ├── about.html          About Your Coach (Rob's story, stats, CTA)
│   ├── services.html       Services & Pricing (4 packages, 3-month VIP, objection-
handling)
│   ├── connect.html        Connect (Clarity Call block, contact cards, contact
form, FAQ)
│   └── clarity_call.html   Free Clarity Call intake form (11 warm questions, "Send
My Story →")

Brand Tokens (from Elementor site-settings.json, 2026-03-31 backup)

Token	Value	Use
`--color-primary`	`#2A3A56`	Navy — headings, nav bg
`--color-secondary`	`#53A0B7`	Teal — links, decorative accents
`--color-accent`	`#4A3B63`	Deep purple — primary CTAs
`--color-text`	`#1B1C1D`	Near-black body copy
`--color-mag-purple`	`#D2CCFF`	Soft purple — card bg
`--color-mag-teal`	`#97E7FF`	Light teal — hero label, highlights
`--color-mag-light-purple`	`#F9F5FF`	Very light purple — section bg
`--color-mag-light-teal`	`#E0F8FF`	Very light teal — section bg
`--color-mag-gray-teal`	`#DEEAFF`	Pale blue-grey — subtle bg
`--font-heading`	Vidaloka	Google Fonts serif
`--font-body`	Roboto	Google Fonts sans-serif

Image Assets (✅ local — no longer loading from WordPress)

All images are now stored locally in the `images/` folder and referenced via relative paths in HTML (e.g. `images/MAG%20Logo%20Square%20Icon.png`).

File	Used In	Purpose
`MAG Logo Square Icon.png`	All pages (nav + footer)	Primary square logo
`MAG Logo.jpeg`	Backup	Old rectangular logo
`MAG Hero Image.png`	index.html	Hero background / Rob hero image
`Rob with Chin in Hand.png`	index, services, connect	Rob portrait (welcome & consult blocks)
`Rob with Black Suit Jacket.png`	about.html	Rob portrait (about page)
`Rob's White Shirt Image.png`	—	Available, not yet placed
`Happy Woman Image.png`	—	Available, not yet placed
`Frustrated Man Image.png`	—	Available, not yet placed
`New Skills Image.jpeg`	—	Available, not yet placed

Note on paths: HTML files in `webpages/` reference images as `images/[filename]` (no `../` prefix). This works because the site is served from the root directory.

Navigation Class Pattern

All pages use `.primary-nav` + `id="primary-nav"` + `aria-controls="primary-nav"`. The JS in `main.js` targets `.primary-nav`. **Never rename this to `.site-nav`** — that was the old Elementor class and will break mobile nav.

Accessibility Standards

- **WCAG AAA minimum (≥7:1)** on all text/background combinations — not just AA (4.5:1)
- `btn--teal` uses `#14586f` (7.91:1 on white — AAA compliant, updated April 10 2026)
- Footer text: minimum `rgba(255,255,255,0.80)` on `--color-primary` bg (7.98:1 — AAA)
- `--color-secondary-dark: #14586f` — use this for teal text links (7.91:1 on white)
- `--color-muted: #404654` — use for muted body text (9.45:1 on white — AAA)
- `btn--outline-white` for ghost buttons on dark hero/banner backgrounds
- All `<img>` elements need descriptive `alt` text (see alt text guide in MAG_Copy_Drafts.md)
- Skip link, `aria-current`, `aria-label`, `aria-expanded` patterns in place
- `prefers-reduced-motion` respected in CSS for all animations
- 48px minimum touch targets on all interactive elements

Known Pending Items (as of 2026-04-10)

Item	Status
Contact/intake form backend	Netlify Forms wired (HTML attributes in place) — needs notification email configured (MY-18)
Real testimonials	Rob to provide real client quotes and photos
Hero headline choice	Rob to choose from Candidates A/B/C in MAG_Copy_Drafts.md
Refund/no-show policy	Rob to decide details before publishing to services page
DMARC upgrade (DNS)	Escalation path: p=none → quarantine → reject as Kit builds sender reputation
DNS transfer to Netlify	⚠️ **BLOCKED** — Nameservers are IONOS (not GoDaddy). Need IONOS access to change A record from `74.208.236.205` → `75.2.60.5`. Must configure custom domain in Netlify FIRST.
Elementor update	Rob to run Elementor update in WP admin (Task 39)
Kit email sending config	Rob to configure SPF/DKIM/sending domain in Kit settings (Task 40)
~~Image download~~	✅ **DONE** — all images downloaded and stored locally in `images/`
WordPress uqokxuwa account	Sean to check wp-admin/users.php manually

---

Working Guidelines

1. **Always read this file first** in a new session — don't assume you remember the structure.
2. **WCAG AAA required** — ≥7:1 contrast on all new color choices. Never introduce a new color without verifying. See verified values in the Accessibility Standards section above.
3. **Local preview workflow** — HTML files live at the project root. Double-click `start.bat` (or run `npm run dev` in Git Bash) to launch `browser-sync` on http://localhost:3000/ with auto-reload on save. The `partials/header.html` and `partials/footer.html` are injected client-side by `js/partials.js` — no build step.
4. 🚫 **NEVER push to GitHub without Sean's explicit permission.** Every push triggers a Netlify deploy which consumes paid Netlify build credits. Commit freely and often locally — commits are free. Do not run `git push` unless Sean has said "push it", "deploy", "ship", or similar explicit go-ahead in the current turn. If in doubt, ask first. Batched commits wait in the local repo until Sean says to push.
5. **Commit after each meaningful change**: `git add [specific files] && git commit -m "description"` — commit locally without pushing. Pile commits up safely on `main` until Sean gives the push signal.
6. **CTA button language**: Use "Free Clarity Call" (not "Free Consultation" or "Contact"). Per Elizabeth's feedback (April 15, 2026): high-intent language converts best. All CTA buttons linking to consultation.html

now use "Book Your Free Clarity Call" or "Schedule Your Free Clarity Call".

7. **Brand voice**: warm, empowering, strengths-based. No clinical language, no pity framing. See full brand guide in `G:\My Drive\Work\Work with Rob\Claude Project Meta\MAG_Copy_Drafts.md`.
8. **Rob's decisions pending** — do not publish anything marked "Rob to decide" without his confirmation.
9. **Update this file at session end** — record completed items, new constraints, and current state of pending items.
10. **Linear status workflow.** Claude only ever takes a ticket to **In Review** when the work is complete. Sean reviews with Rob, then moves to **Done, Awaiting Payment**. Once Rob has actually paid, the ticket moves to **Done, Paid**. Claude must never set `Done, Paid` (or `Done, Awaiting Payment`) directly — those two transitions are owned by the human review/payment loop. Status IDs (My-autism-gifts team): In Review `a642f451-e6ed-4b68-a8f0-c4860585fa11`, Done Awaiting Payment `53e49b02-89e3-4555-bfab-72b9d9e0a3eb`, Done Paid `64aa7a25-c013-4087-9080-7d33381af71b`.

Recent Work (April 15, 2026)

- **Footer standardized** across all 5 pages: `footer-inner` grid, nav headings, consistent content (commit `a59fc6a`)
- **CTA buttons renamed** from "Free Consultation" to "Free Clarity Call" per Elizabeth's feedback
- **Testimonial carousel fix**: prevented timer accumulation causing jumpy 2-second transitions; now 5-second intervals
- **Header text** ("My Autism Gifts") made visible on all pages (was `sr-only` on 3 pages)
- **Header button contrast** fixed: `.primary-nav .btn.btn--primary` CSS specificity override added
- **Footer logo** made responsive: `max-width: 231px; width: 100%; height: auto`
- **Local preview workflow** established: `bash build.sh` → `npx serve dist` (saves Netlify credits)
- **Linear task cleanup**: 5 WP-era tasks canceled (MY-35, MY-36, MY-38, MY-28, MY-6 — superseded by Netlify migration); MY-47 (footer) and MY-18 (Netlify form notifications) marked Done
- **Task mapping spreadsheet** created: `MAG_Linear_Task_Mapping.xlsx` (3 sheets)
- **DNS research**: Nameservers are IONOS (not GoDaddy). A record change: `74.208.236.205` → `75.2.60.5`. Email records (MX, SPF, DKIM, DMARC) unaffected.

Previous (April 10, 2026)

- All CSS color combinations verified WCAG AAA (≥7:1)
- Footer rgba white text raised to minimum 0.80–0.82
- Linear integration: MY-5 through MY-63 cover all tasks + CO-001/CO-002

Recent Work (April 27, 2026 — Meeting 8)

Calendar / SMS reminders:

- Confirmed Calendly Standard ($10/mo) is already in production with Stripe — no migration needed
- Adding 24h + 2h + 1h SMS reminder Workflows (250 free credits/mo on Standard plan, no per-msg fees)
- Free Clarity Call flow (Netlify form vs free Calendly event vs hybrid) — open decision for Rob/Elizabeth

- Full report: `G:\My Drive\Work\Work with Rob\MAG Documents\Reports\TidyCal-vs-CalCom-Calendly-Comparison-v3.md`

Brand alignment (per Brand Bible v1.0):

- Authoritative MAG package names: **Free Clarity Call · Starter · Standard · Committed · VIP 3-Month** (NOT "Basic / Regular" — that was an old internal-doc error)
- "Consultation" → "Clarity Call" everywhere, including URL slug `/consultation/` → `/clarity-call/` with 301 redirect
- All paid sessions are 55 minutes; Clarity Call is 30 minutes free
- Brand Bible canonical reference: `G:\My Drive\Work\Work with Rob\MAG Documents\Brand\MAG_Brand_Bible_v1.pdf` — read Sections 1-5, 12, 18 before any client-facing content

Cloudflare onboarding (pending Rob's approval):

- Free plan as front-of-stack security layer — solves apex IPv6 gap for mobile carriers (Netlify free tier can't serve apex AAAA)
- Layperson explainer: `G:\My Drive\Work\Work with Rob\MAG Documents\Reports\Cloudflare-Security-and-IPv6-for-MAG.docx`
- Linear: new checkbox on MY-27, full resolution write-up on MY-56

Image assets:

- Added: `images/MAG Logo Blue and White Variants/Final Purple MAG LOGO Blue Banner - Transparent BG (600 x 600 px).png` — purple background removed, blue banner + logo on transparent BG (for use on Zoom BG v7 revision and other dark-bg placements)

Linear updates done in session: MY-27 (DNS runbook checkmarks + Cloudflare DNS task), MY-56 (3-layer security recommendation, security checkpoint resolved)

Linear changes pending Sean's approval: see `G:\My Drive\Work\Work with Rob\MAG Documents\Reports\Proposed-Linear-Changes-from-4-27-Meeting.md` — close-outs for the never-adopted TidyCal tasks (MY-7/8/9/10/11/59) + 5 new task proposals (SMS reminders, Clarity Call flow decision, Consultation→Clarity Call rename, Cloudflare onboarding, Zoom BG v5 revision)

Zoom BG v5 revision (CO-3, $10): decision log + spec at `G:\My Drive\Work\Work with Rob\MAG Documents\Reports\Zoom-BG-Decision-Log-v6-to-v5.md`. CO-3 .docx generated.
